ACCESSIBILITY NOTES

ACCESSIBILITY IS PART OF THE VISUAL SYSTEM, NOT A LATER ENGINEERING DECISION.

Contrast

Ink on Bone/Paper; accent and semantic text must meet WCAG AA. Verify final brand colors before lock.

Focus

Visible 3px focus ring and 2px separation on links, fields, choice cards and approval actions.

Touch + hover

44px minimum target. Hover is never the only way to reveal price, help or status.

Selected states

Use border, check/icon and a written state; colour alone is insufficient.

Errors + save

Place message beside field; explain retained data and a recovery action. Announce status changes.

Proof review

Keyboard zoom and comments; visible current version; approval acknowledgement is explicit.

File upload

Label formats/limits, progress, selected file and replacement path; error does not erase the file.

Motion

Reduced motion removes directional masks/transforms and reveals final content immediately.

Type

Body ≥16px, support ≥14px. Metadata 12–13px only when noncritical and high contrast.

Privacy

Participants see only own data; public imagery and metadata do not expose private records.

ASSET GAP REGISTER

Actual HolyPearls capability and client claims need real evidence. Temporary visuals are marked.

Stage 4.1 design changelog

CHANGED

A provisional visual system, reusable component primitives and 18 high-fidelity anchor compositions now extend the frozen low-fidelity architecture.

UNCHANGED

Stage 3.1A–F information architecture, record/state models, permissions, commerce paths, private indexing and responsive obligations.

PROVISIONAL / CLARIFIED

Palette, type, mark treatment, photography and illustrative prices are provisional. Temporary media is never presented as verified HolyPearls production or client work.

BRAND INPUT NEEDED

Actual logo and identity rules; approved color/type; product photography; process/capability proof; client permissions; real prices and product specs.
